

PROJECT STEPS FOR IMPLEMENTATION

STEP-1: You have to create a new folder in that folder place the files which were provided in Git-Hub repository. Notice that you place the files like below figure 1.1.

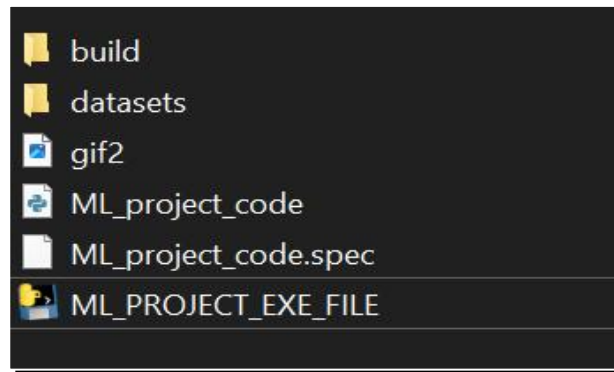

Figure: 1.1

STEP-2: After you done with folder now double click ml-project exe file to execute the file and you will get interface like below figure 1.2.

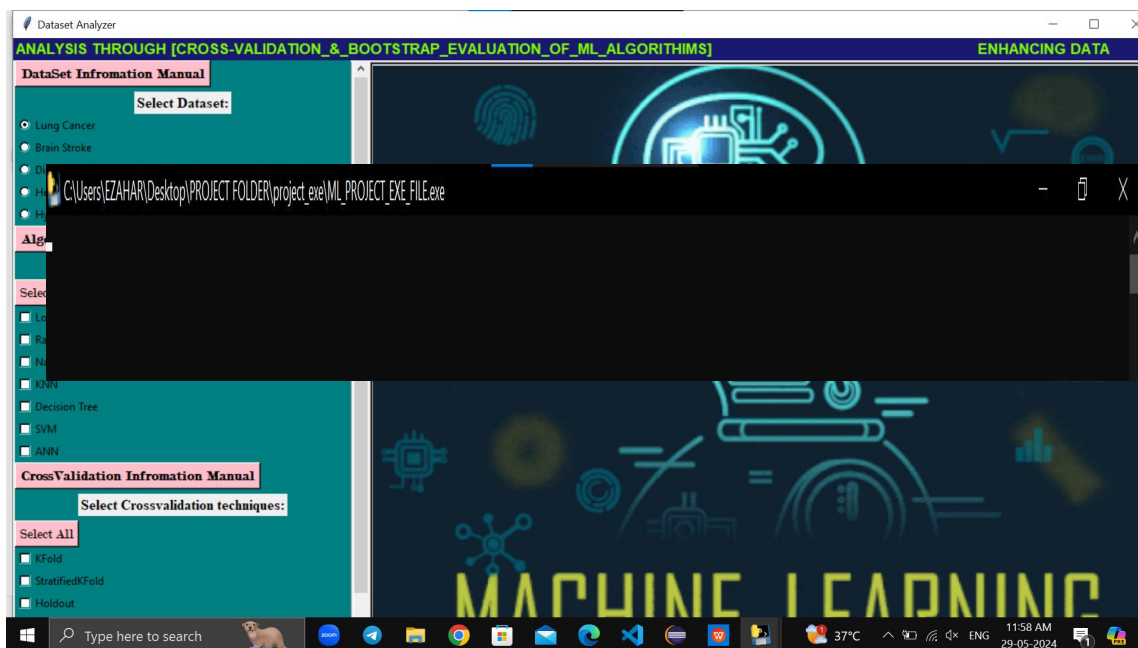

Figure:1.2

STEP-3: After successfully running the exe file you can have the many options and buttons at your left side of the screen you can select button and click on it then you will get information about the algorithms and techniques which we have applied. you can see in below figure 1.3.

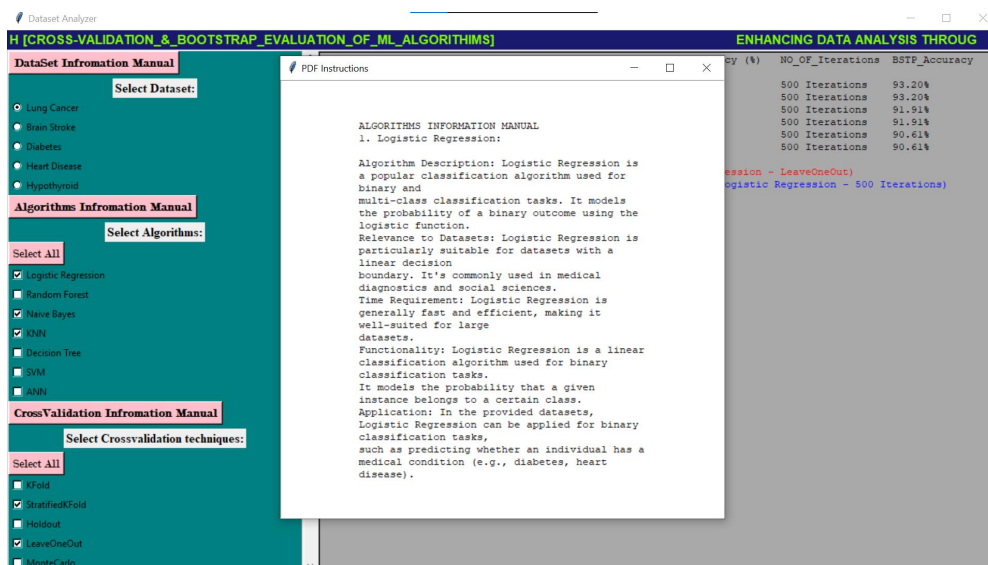

Figure :1.3

STEP-4: Now you have to select the algorithms and techniques to implement and after selecting the requirements we have to click on the calculate button then goes into the execution process by showing the popup message and click on okay . then we have to wait for a while.shown in below figure 1.4, 1.5.

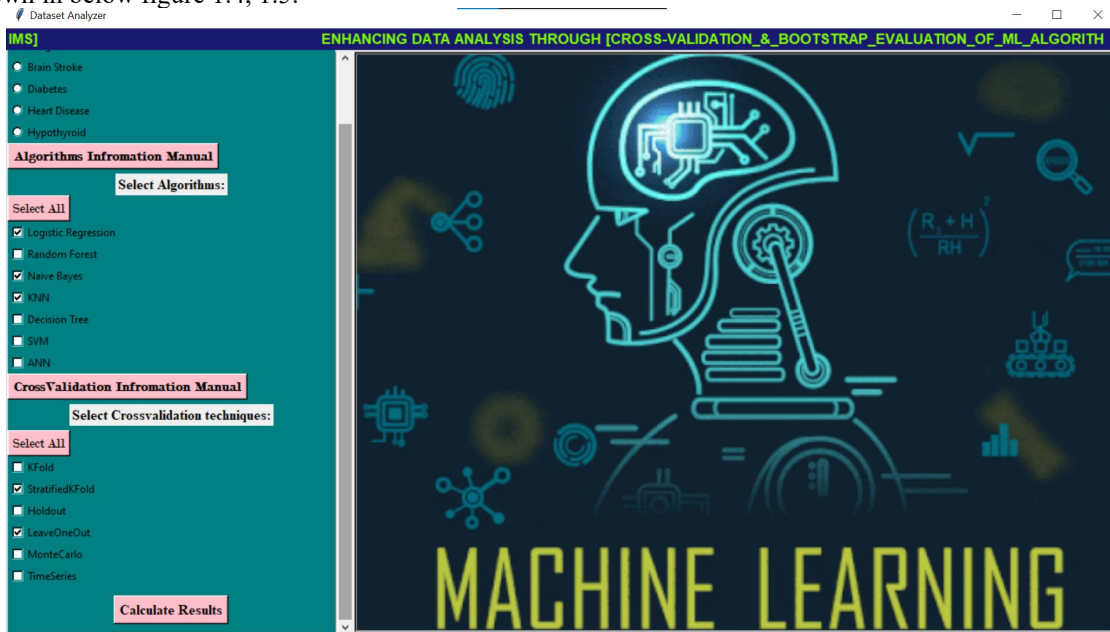

Figure :1.4

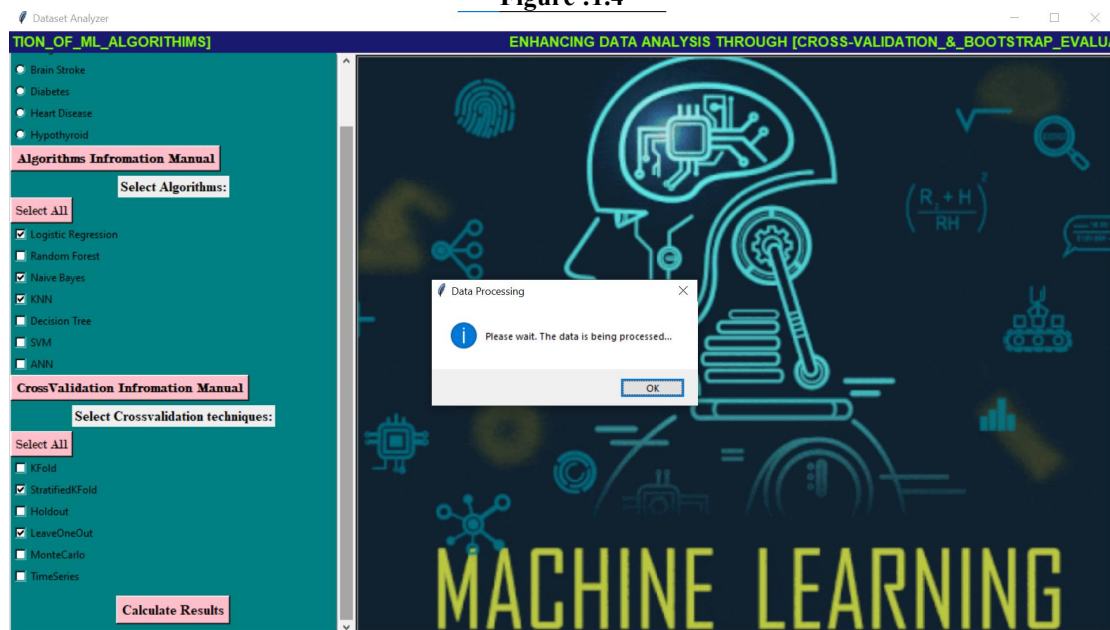

Figure:1.5

STEP-5 : After some time you will get results on the screen with a popup message and a bar graph.
